

Amir Rostami

Toronto, Ontario, Canada

PROFESSIONAL SUMMARY

Senior Software Engineer with 7+ years of experience designing and delivering large-scale, production-ready systems across mobile, backend, cloud, and real-time applications. Proven track record building high-throughput distributed architectures, RESTful and gRPC APIs, CI/CD pipelines, and enterprise integrations for clients in fintech, iGaming, SaaS, and media. Strong background in full software lifecycle - from requirements and system design to testing, deployment, and post-launch optimization. Adept at collaborating cross-functionally with product, design, and engineering teams in Agile environments. Passionate about clean architecture, code quality, and engineering process improvement.

CORE COMPETENCIES

Distributed Systems - RESTful & gRPC API Design - Mobile Development (iOS/Android) - Cloud Infrastructure (AWS, Azure, GCP) - CI/CD & DevOps - Real-Time Systems - Enterprise Integrations - Microservices Architecture - Database Design - Agile/Scrum

TECHNICAL SKILLS

Languages: C#, Python, TypeScript, JavaScript, Kotlin, Swift, Java, C++, C

Frameworks & Backend: .NET Core, ASP.NET, Node.js, React.js, Django

Cloud & DevOps: AWS, Azure, GCP, Docker, Kubernetes, Jenkins, GitHub Actions, Artifactory

Databases: PostgreSQL, MongoDB, Redis, MySQL, NoSQL

APIs & Integration: RESTful APIs, gRPC, WebSockets, Webhooks, HubSpot API, Salesforce API

Automation & Low-Code: Make.com, Zapier, n8n

Testing: Unit Testing, Integration Testing, Performance Profiling, TDD

PROFESSIONAL EXPERIENCE

Mobile Software Engineer | Product Madness | Montreal, QC | November 2025 - June 2026

- Designed and optimized mobile application systems using multithreaded programming patterns to maximize throughput and minimize latency on iOS and Android targets.
- Authored comprehensive unit and integration test suites; performed profiling and debugging cycles to achieve performance and stability benchmarks.
- Integrated with CI/CD pipelines using Jenkins, Artifactory, and GCP to automate build, test, and release workflows.
- Contributed to system architecture discussions and design reviews in Agile sprint cadences, driving code quality improvements across the team.

Integration Engineer | Sector Growth | Toronto, ON | March 2025 - November 2025

- Designed and implemented end-to-end custom API integrations for enterprise clients, enabling seamless data exchange across disparate systems.
- Engineered robust data migration pipelines ensuring high availability, data integrity, and minimal downtime during large-scale transfers.
- Built CRM integrations with HubSpot, Salesforce, and Monday.com, reducing manual data operations and increasing CRM data accuracy for clients.
- Delivered AI-assisted workflow automation and RAG (Retrieval-Augmented Generation) solutions using Make.com, Zapier, and n8n, cutting manual process time by an estimated 60%.

Co-Founder & Lead Engineer | Artifacts Lab | Toronto, ON | January 2020 - Present

- Founded and led the engineering practice, translating complex client business requirements into scalable technical architectures and functional systems.
- Owned end-to-end delivery across multiple concurrent client engagements, coordinating design, development, and QA phases from kickoff through launch.
- Managed cross-functional teams and external contractors, establishing engineering standards and code review practices that improved delivery consistency.

Senior Software Engineer | Hard Rock Digital | Toronto, ON | February 2024 - February 2025

- Designed and implemented scalable system architectures for flagship iGaming platforms processing millions of real-time transactions with high reliability and low latency.
- Built and maintained production-grade C#/.NET backend systems including in-app messaging, reward engines, and real-time gameplay event processing.
- Introduced unit and integration testing frameworks that reduced production defect rates and improved regression coverage across mission-critical features.
- Automated CI/CD pipelines using GitHub Actions, reducing manual deployment effort and accelerating release cycles for a multi-team engineering organization.
- Coordinated directly with internal and external stakeholders to gather requirements, align priorities, and ship robust, high-impact features on schedule.

Senior Software Engineering Instructor | Circuit Stream | Toronto, ON | January 2023 - February 2025

- Designed and delivered technical curriculum covering software engineering best practices, SOLID principles, OOP design patterns, and production-scale system architecture.
- Mentored cohorts of junior and intermediate developers from requirements definition through full system delivery, with a focus on career readiness.
- Conducted code reviews and architectural trade-off sessions, accelerating students' transition into professional engineering roles.

Senior Software Engineer | TerraZero | Toronto, ON | March 2023 - November 2023

- Owned feature delivery end-to-end across the product lifecycle, from design through production deployment and monitoring.
- Collaborated with cross-functional teams (art, design, product) to align technical execution with product goals, consistently meeting delivery deadlines.
- Drove continuous process improvement and code quality initiatives, contributing architectural recommendations that reduced technical debt.

Software Engineer - Interactive Systems | Infinite Frame Media | Toronto, ON | July 2022 - December 2022

- Contributed to development of 'The Choice,' an interactive documentary platform requiring real-time event-driven state management and multimedia synchronization.
- Implemented interactive user experience systems blending video playback, animation, and real-time user input within a low-latency pipeline.

R&D Software Engineer | Antimodular Research | Montreal, QC | April 2022 - August 2022

- Developed custom hardware-software integration solutions for large-scale interactive public installations, combining embedded systems with real-time software backends.
- Collaborated with world-renowned artist Rafael Lozano-Hemmer, delivering novel sensor-driven software systems for public art exhibition environments.

Software Engineer - AR Applications | Studio Above & Below | London, UK | April 2022 - July 2022

- Extended AR application features for 'Digital Atmosphere,' a data-driven sculpture with real-time weather API integration rendered in augmented reality on iOS.
- Built real-time data visualization pipeline connecting external REST APIs to 3D AR rendering, deployed to production on iOS using ARKit.

Research Software Engineer | BMS Lab, University of Twente | Netherlands | January 2020 - September 2020

- Developed custom VR simulation environments and data collection systems for academic psychological research studies.
- Collaborated with graduate researchers to design technically sound experimental tooling, producing reliable datasets for peer-reviewed publications.

NOTABLE PROJECTS & RESEARCH

- **AliceLab for Computational World Making (York University)** - Developed generative algorithms and interactive digital systems for computational art research.
- **Dispersion Lab (York University)** - Built Kinect-based motion tracking system with real-time computer vision: boundary extraction, subject tracking, and pose detection.
- **Philip Beesley Architect / Living Architecture Systems Group** - Designed a multi-sensory reactive audio system using distributed microprocessors and sensors; deployed at the Royal Ontario Museum as part of the 'Amatria' installation.

EDUCATION

Bachelor of Science, Computational Arts, Minor in Game Development | York University | Toronto, ON
